MPA Networks Protects SMBs from Exponential Growth in Cybercrime

Leading Managed Technology Services Provider Educates Businesses on Dramatic Increase in Cybercrime Directed at Small-Business Owners and How to Prevent It

SAN MATEO, CA — December 2020 – MPA Networks, Inc., a leading managed technology services provider (MTSP), announced today that it is educating businesses on the dramatic spike in cybercrime targeted towards small to mid-sized (SMB) businesses. Cybersecurity Ventures predicted that “cybercrime will cost the world \$6 trillion annually by 2021, up from \$3 trillion in 2015.” Effectively, this means that criminals have access to unlimited budgets to increase the sophistication of their attacks, meanwhile, business owners are doing little or nothing to defend themselves. Those diverging trendlines signal a precarious future. Furthermore, due to COVID-19, most businesses have been forced to operate remotely which has increased their reliance on home networks to perform their daily duties. This increased reliance on insecure home networks has left them more susceptible to breaches than ever before.

Most business owners are aware of this problem, but disregard it as a distant threat that can be eliminated through the standard cybersecurity solution – which is comprised of a prepackaged firewall, anti-virus/malware protection and data backup plan. However, while that used to be a sufficient solution, it’s unfortunately no longer appropriate. Hackers are constantly evolving their methods and as they find new ways of causing a breach, new technologies are

needed to combat these advances. The gap is widening and is also showing no signs of slowing. In fact, according to Accenture, “Security breaches have increased by 67% since 2014.” This fact suggests that while prior dismissals may have been the appropriate business decision at the time, now, businesses must take proactive action to support their staff, especially while they increase their risk of breach in the mandated work-from-home work environment.

Michael Price, President and Founder of MPA Networks, states, “The game has completely changed and businesses need to understand the implications of inaction. For example, in several states, like California for example, you’re legally obligated to publicly announce any breach to news outlets. This can do irreparable harm to a company’s reputation, which is an extremely costly burden to bear, especially when cybersecurity solutions are readily available to eliminate these risks.” He later added, “Regardless of which provider you use, the best tactic to employ is a layered approach. That way, breaches can be contained, assets can be protected and exposure is minimized. When a business is breached, it’s important ensure that the whole company isn’t incapacitated.”

Another key factor that has changed is the average duration of a breach. Most people assume that a typical breach, like a ransomware attack for example, results in a breach, demand for a ransom and resolution within a few days. However, according to IBM, “the average life cycle of a breach (from breach to containment) lasted almost 11 months.” The

employee downtime from something like this can be a nightmare for management and in many instances, can put businesses on the brink of collapse.

In sum, businesses who have managed to survive the disruption that 2020 has caused need to reassess their security strategy for 2021 so that they don’t get caught in “survival-mode.” While business owners are being tested on every front, Price summarizes why cybersecurity needs to be an immediate priority for every business in the modern age, “It takes 20 years to build a reputation and only a few minutes of a cyber-incident to ruin it.”

ABOUT MPA NETWORKS INC.

Serving the Bay Area for over 30 years, MPA Networks is the most trusted provider of managed IT services in the Silicon Valley. Proactive IT Management, IT Consulting, Cloud Desktops, Cloud Migration, Cybersecurity, Telephone systems, Backup & Disaster Recovery. MPA provides reliable IT for companies that can't afford downtime. On-premises or in the Cloud. Onsite floor support or 24/7 Remote Helpdesk. We design a concierge service program specific to your technical requirements. From San Francisco to San Jose to Oakland, and the entire Silicon Valley Peninsula, we have the proven track record, the referrals, the best testimonials in the business. Leapfrog your competitors with an IT partner you can grow with. For more information on MPA Networks, visit www.mpa.com
